

BULLET GUARD

ABSTRACT

A pivotally adjustable shield includes a first member having substantially planar front and rear surfaces and an edge portion integral therewith. The shield further includes a second member having substantially planar front and rear surfaces and an edge portion engageable with the edge portion of the first member. An elongated pin is positioned through a plurality of apertures of the first and second members. An arm brace is connected to the first member and extends rearwardly therefrom and a hand bar is connected to the second member and extends rearwardly therefrom. A Velcro patch or clip is affixed to the second member and a firearm holster is connectable thereto.
